

Mottak, Dving 9, Vegard G. Jervell

Oppg. 1)

CsCl:

Prim. kub.

CN: (8,8)

NaCl

CN: (6,6)

Cl: Fcc-pakning, Na i okt. hull

Oppg. 2)

$$r_k = \frac{1}{2}D - r_a$$

$$D = \sqrt{d^2 + (2r_a)^2}$$

$$d^2 = (2r_a)^2 + (2r_a)^2$$

$$d^2 = 8r_a^2$$

$$D = 2\sqrt{3}r_a$$

$$r_k = r_a(\sqrt{3} - 1) \Rightarrow \frac{r_k}{r_a} = 0,732 \quad \square$$

hvis $r_k < 0,732r_a$ fyller det ikke hullet

Oppg. 3)

$$r_{Fe^{2+}} = 0,077 \text{ nm}$$

$$r_{O^{2-}} = 0,140 \text{ nm}$$

Enhetsselle: O^{2-} ; fcc

$$a = 2r_{O^{2-}} + 2r_{Fe^{2+}} = 0,434 \text{ nm}$$

$$V_{\text{cell}} = a^3 = 0,0817 \text{ nm}^3$$

$$m_{\text{cell}} = 4m_{O} + 4m_{Fe}$$

Fordi lever celle inneholder 4.0 O²⁻ og 4. Fe

$$m_i = \frac{M_{m,i}}{N_A}$$

$$m_{\text{cell}} = 4,78 \cdot 10^{-28} \text{ g}$$

$$\rho = \frac{m_{\text{cell}}}{V_{\text{cell}}} = 5,85 \text{ g/cm}^3$$

Oppg. 4)

En suspensjon av et krystallinsk pulver
i vann helles i en støp og varmes opp.

Oppg. 5)

Vakanter: det mangler noe

Interstittielt atom: Noe på feil plass

Substitusjonsdefekt: Noe har byttet plass

Fargesenter: Fritt elektron i en vakans

Chotky / Frenkel: Vakans + interstitiell
Anion + kation-vakanter

En vakans endrer støkiometrien

Oppg. 6)

Glassherm: Varmebehandlet glass slik at
det dannes krystallinske partikler

Oppg. 7) Store prøver har flere defekter
→ lavere bruddstyrke

Oppg. 8) Glasset leges fortest ytterst

→ kompressiv spenning

→ hardt glass
