Oppg. 2a)

$N=5$, $\bar{E} = 2000 \text{ time}$, $T_k = 6 \cdot 10^6$ 'O' $= 75 \cdot 10^6$

Antar $\eta = 80\%$ effektivitet

$$t_{\text{eff}} = N \bar{E} \eta = 8000 \text{ time}$$

$$\text{Pris per time} = \frac{T_k}{t_{\text{eff}}} = 750 \frac{\text{kr}}{\text{time}}$$

med $\eta = 0,7$ (som i LF)

$$\text{PPT} = 857,1 \frac{\text{kr}}{\text{time}}$$

2b) For å nå omsetningsmålet:

$$\text{PPT} = \frac{Q}{t_{\text{eff}}} = 1071 \frac{\text{kr}}{\text{time}} \quad (\text{med } \eta = 0,7)$$
